Anuko World Clock replaces the regular Windows system clock with several time zones of your choosing. Multiple time zone clocks can be placed either in the system tray or on desktop. It makes the Windows taskbar nicer by not only fully supporting Winamp digital skins, but also by providing a set of analog skins for vertical and wide taskbars. It comes with a graphical World Map and a free City Database for easy configuration of clocks. It's also an atomic-time synchronizer and an alarm clock; you can set alarms for any time zone. This program may be used as a scheduler to launch applications or do custom actions.
