

## **PSPad editor 4.5.0.2175**

Posted by: ManXP

Posted on : 2005/12/28 7:39:12

PSPad is a universal freeware editor. There is no complex install process; the program is ready to work immediately, without requiring customization. It supports many file types and languages, with syntax highlighting. There are macros, clip files and templates to automate repetitive activities. An integrated HEX Editor, Project support, FTP Client, Macro Recorder, File Search/Replace, Code Explorer, code page conversion, are just some of the many possibilities that PSPad can offer you.

■ Software License: Freeware

■ Operating Systems Support: Microsoft Windows

■ Download Link: [PSPad editor 4.5.0.2175](#)

■ Homepage: [PSPad editor](#)

■ Version ChangeLog:

Unicode support.

Ability drag/drop text between editor windows.

Added opera8 support in program settings / system.

Added pasv command to keep ftp online.

Added the system variable %filename2% - returns file name without an extension.

Changed file type plugins. Read readme.Txt file in plugin directory. This is not a last plugin change. If you use plugins, please wait for the next build.

Clip files handling was rewritten.

Close all function added into file tab context menu.

Cobol highlighter - in highlighter settings is possible to set area a start, area b start and code end position.

Code explorer for fortran.

Connect to ftp button - added drop-down menu with the existing ftp connection list.

Copy directory with your last pspad full version to separate directory and replace pspad.exe from cab archive. You can work with both version together..

Double click in perl highlighter selects a variable include @, \$, %.

Don't forget, this is first alpha version only !.

Expanded hash generator (md4, md5, sha1, ripemd160).

Expanded sql code explorer.

Expression evaluator allow you paste the result only or an expression with the result.

Extended end key option added to extended home key.

Extended home/end key separated to two options.

External applications and compiler setting - pspad suggest you the application directory in default directory selection.

File icons in ftp client.

File setting stores the right edge position too.

Hide file tab numbering - new option in the program settings / program-look.

In sort function is possible enter locale for sorting (available on WinNT only).

In spell check settings you can switch on/off auto correction.

Internal html preview refresh after save file if visible.

Is possible to change auto complete window size.

Kixtart highlighter - new keywords.

Max. Number of autocomplete items was limited to 20.

Mysql highlighter - added new mysql 5.0 keywords.

Native unicode support - you can write in several charsets together.

New comment styles \$\$ and /\* \*/ in user highlighter.

New editor command ecSelWord - same functionality as Shift+ctrl+down.

New file tabs panel.

New korean localization added (shin ryu).

New option indent width (program settings / editor) - individual number of chars for the indent/unindent block. It has no influence if real tabs are used.

New scripting functions - printFile (print file - for text only !) And activate (brings editor to the top).

New VBScript example - function for print all files.

New user highlighter comment style #| |# (clisp).

New variable in [special settings] section - simplefiletabs=0 switch off owner draw for file tabs - problems with 64bit os.

New wordwrap (i hope functional).

Possibility change clip list window size.

Program settings / program-look - you can set format of file tab numbers. If you don't want to have numbered file tabs, set format to %name%.

Proxy password is crypted now. If you used proxy password in program settings / internet, you must re-enter it.

Pspad registered itself into register, key "app paths". You will be able to run it without write path.

Rewritten insert text to lines (alt+i) function. You can insert begin and end of the text at once now.

Search.Ini file is obsolete. All settings was moved into recent.Ini file.

Search/replace in files - added unicode support - please test it before serious work.

Single click in the project tree activates a file if open.

Sort function with selected locale rules.

Speed optimizations - search/replace and reformat html.

Switch editors in split window with ctrl+tab or shift+ctrl+tab.

Tcl/tk highlighter extended of new keywords (expect extension).

Tcl/tk highlighter supports now tix extension.

The running time information added at the end of the compiler log.User convertors - the backward conversion takes replace list from the end.

User highlighters - new vcomment style " ". Only used comment styles are stored in definition.  
You can switch off system file icons (speed up network drives access) in program settings.
